Education

Sreenidhi Institute of Science and Technology

Expected Graduation: May 2026

Bachelor of Computer Science Engineering CGPA: 8.5

Hyderabad

Work Experience

Wexa

Mar 2026 – Jun 2026

Software Engineer Intern

Hyderabad, Onsite

- Architected and shipped an **AI voice interview platform** on Next.js 14, LiveKit Agents (Node.js), and Kubernetes, replacing human interviewers with an autonomous voice agent across conversational video and three-panel coding interview modes.
- Engineered a **multi-agent voice workflow** with typed handoffs, shared session state, and 6 LLM tools; hardened the voice pipeline with **FallbackAdapter chains** across STT, LLM, and TTS providers preventing single-vendor outages.
- Integrated **Judge0** sandboxed code execution across 12 languages with Zod-validated whitelisting and sliding-window rate limits; shipped **MediaPipe proctoring** (WASM) detecting 10+ violation types with a 0–100 suspicion score.

ZofAI

Sep 2025 – Dec 2025

Software Engineer Intern

SF, Remote

- Wrote **agent orchestration logic using LangGraph**, coordinating a multi-agent pipeline where a bug-finding agent detects regressions and hands off findings to a report generation agent with full traceability across services.
- Built the **bug-finding agent** that inspects workflows, captures evidence of risky behavior, and flags regressions; built the **report generation pipeline** that compiles structured, audit-ready reports per run.

Kartavya Technology

Feb 2025 – Apr 2025

Backend Engineer Intern

Bangalore, Remote

- Built a **RAG-based support chatbot** using **HuggingFace embeddings**, **Qdrant** vector DB, and a custom **chunking and indexing pipeline** over internal PDF documents; integrated retrieval with LLM response generation for context-aware answers.
- Built a centralized data aggregation server via **cron jobs** to sync and manage application data across multiple in-house products.

Projects

Dash | Demo | Source Code

ReactJS | TypeScript | ExpressJS | WebContainers

- Browser-based AI dev environment that **generates full-stack applications from natural language prompts**, running entirely in-browser via WebContainers with no local setup required.

AI Interview Pro | Demo | Source Code

ReactJS | TypeScript | ExpressJS

- Full-stack AI interview simulator with **resume-based dynamic question generation** and LLM evaluation of communication and technical competencies; three-step workflow delivers real-time feedback in under 10 minutes.

Linux Playground | Demo | Source Code

ReactJS | TypeScript | ExpressJS | AWS

- In-browser Linux terminal platform using **ttyd** to serve interactive shell sessions over WebSockets with low-latency access; deployed on AWS for real-time command-line education and experimentation.

Pair Code | Website | Source Code

ReactJS | ExpressJS | WebSockets

- Real-time collaborative coding platform with synchronized multi-user editing, live code execution, language selection, and **integrated video chat** between participants.

Achievements

- Runner-up** out of 300 teams at the **HackArena National Level Hackathon** organized by IEEE at Guru Nanak Institution.
- Runner-up** out of 80 teams at the **Hash it Out Hackathon** organized by SDC at SNIST.
- Runner-up** at the **Student Tribe Codeathon**, competing against participants across multiple colleges.

Leadership

Technical Head — Cloud Community Club

Nov 2024 – Present

SNIST

- Conducted **AI Hack Day 2025** in collaboration with **IIIT Hyderabad**, Viswam.AI, Swecha, and AI Days 2025.
- Mentored teams at **Project Schools**, guiding peers through end-to-end industry-level projects from design to deployment.
- Conducted workshops on **Web Development**, **AI Engineering**, and **Cloud Computing** for 100+ students.

Technical Skills

Languages: JavaScript, TypeScript, Python, Java, SQL, HTML5, CSS

AI / ML: RAG, LangChain, LangGraph, LiveKit Agents, Multi-Agent Systems, MediaPipe, Prompt Engineering, HuggingFace, Qdrant, OpenAI, Anthropic

Frontend: ReactJS, Next.js, WebSockets, WebContainers, Monaco Editor, Tailwind CSS

Backend: Node.js, ExpressJS, PostgreSQL, MongoDB, Redis, Prisma, Mongoose

DevOps & Cloud: AWS, Docker, Kubernetes, GitHub Actions, Git, Postman
